1. Plans, Specifications, and Estimates

We typically anticipate producing plans for the following:

- Street Improvement Plans – To accommodate ADA compliant curb ramps and raised median noses.
- Signing and Striping Design
- Traffic Signal Plan – To propose agreed upon traffic signal improvements and operations based on the developed recommendations.

The GTS team believes a detailed field review and as-built plan verification will provide a good base plan for a high-quality design plan and will result in higher efficiencies (less time and costs). Prior to preparing a base plan for the street improvement and traffic engineering design, GTS will obtain copies of available as-built drawings and other available database/information pertaining to the project from the City and other agencies if needed. The field review will include identifying design constraints, verifying as-built information, and observing general site conditions. We will document our findings with photos taken as part of our field review. We will review the preliminary utility information and prepare and send notifications to all utility companies known to operate within the project area. Underground and overhead utilities will be identified, and potential conflicts will be noted and resolved during final design.

Typical tasks could include:

1.1 Topographic Land Survey: The design survey will be developed at 1"=20' scale and will include the following items:

- Sufficient spot elevations and breaklines to accurately develop contours at a 1.0' interval.
- Curbs, right-of-way (and jurisdiction boundary line), flowlines, and gutters.
- Paving types.
- Roadway crown elevations and striping.
- Above ground evidence of utilities.

1.2 Street Improvement Plan: GTS will modify the existing curb ramps to comply with ADA guidelines at the intersection. GTS will utilize the topographic land survey to produce the street improvement plan. The street improvements will be limited to ADA curb ramp reconstruction. GTS will perform a detailed ADA evaluation. We will design all proposed curb ramps per the standards agreed upon with the City. The plans will clearly show limits of construction and curb ramp grades and details. The curb ramp details will be prepared at 1"=10' scale.

1.3 Signing and Striping Design: GTS will incorporate any striping and signage modifications at the project intersection on the corresponding traffic signal plan if it is part of a signal design project, or will produce separate signing and striping plans.

Striping and signage services will include items like improving existing bike lane signages, reinstalling faded striping, or other striping or signage that may be required.

1.4 Traffic Signal Plan: Utilizing the traffic signal as-built plans, survey, and field investigation data, GTS will prepare a traffic signal base plan at the intersection. The base plan is the backbone to accurately design proposed improvements. At this stage of the process, a thorough review is performed on the base plan to ensure accuracy prior to design. The base plan will include centerline, right-of-way, relevant existing street improvements, and existing traffic controls. We will prepare the base plan in accordance with City's format and standards. If the intersection has shared jurisdiction with other cities we will also work with their standards.

GTS has extensive experience in traffic signal design and will utilize that knowledge to identify potential

conflicts before the project goes into construction. For example, proposed signal poles will be strategically placed in the optimum location for driver/pedestrian visibility and will adhere to ADA guidelines. We will also evaluate any current deficiencies or sub-standard equipment that should be upgraded to meet current City agreed-upon standards.

We will provide a detailed traffic signal plan per City agreed-upon format, standards, and specifications. The plan will propose approved signal phases, clearly identifying all existing, proposed, and removed traffic signal equipment to correspond with the overall design intent and shown existing and proposed improvements. The traffic signal plan will be 1"=20' scale unless directed otherwise.

1.5 Utility Verification and Coordination: GTS will request a contact list from the City of utility companies with facilities at the project intersection. We will request utility maps and compile underground and above ground utilities in a separate digital file. This file will be referenced into all relevant design plans and clearly labeled to identify utility type, size, and owner. This will allow us to identify any potential impacts and modify the design as necessary.

We will also send a notification to all utility companies within the project limits at the 70% and/or final design stage for their review to determine if there are any possible conflicts with the proposed improvements. GTS will work closely with the utility companies and other City departments to resolve conflicts prior to final design. A communication log will be preserved throughout the project and provided to the City upon request. GTS will provide coordination with electric utility companies if the design includes modification to the service pedestal and/or point of connection (POC).

1.6 Specifications and Cost Estimates: GTS will prepare the technical specifications using the City's boilerplate template or Caltrans required template and required format. We will use the City-required standards and specifications.

1.7 Pre-Construction Support: GTS will provide pre-construction support services for this project after plans have been approved by the City and other agency. We will attend pre-bid meeting and answer the questions during the construction bidding process regarding the design and specifications. If there are omissions or conflicts in the design prior to the award to contractor, GTS will provide a plan revision.

1.8 Construction Support: GTS will provide construction support services for this project during construction. These services include but are not limited to attending a pre-construction meeting, responding to questions during the construction, reviewing contractor submittals within 72 hours, responding to contractor's requests for information (RFIs) or Change Request (CR), revising design plans per CR, maintaining a log of all changes to approved plan set, reviewing and making recommendations to Contract Change Order (CCO), and providing progress reports.

1.9 As-Built Plan Preparation: After the completion of project construction, we will request the redline markings prepared by the project inspectors and/or contractors on the signed design plans for preparation of as-built plans. The as-built plans will be signed and submitted to the City for the completion of the project.

2. Review/Prepare Traffic Signal Timing/Coordination Plans

GTS will provide signal timing plan support to the City to address the changing traffic conditions. Our tasks typically include the following:

2.1 Field Observations and Data Review: We will review the provided signal timing parameters (yellow/red timing, lead/lag timing, offsets, pedestrian timing, etc.) for potential inconsistencies between timing sheets or other anomalies. We will also coordinate with the City to open the traffic controller cabinets and verify existing controllers. We will also observe traffic flow patterns and signal operations during each peak period along the

corridor. Elements such as uneven lane distributions, queue spillbacks, cut through traffic movements, heavy truck or bus percentages, congestion associated with school activity, and friction factors affecting vehicle speed or intersection throughput will be noted. Crosswalk lengths will be measured using aerial imagery to determine appropriate pedestrian timing.

2.2 Traffic Data Collection: A 24-hour count will be used to understand demand variability by time and determine intersection and corridor peak hours. GTS will collect turning movement counts with vehicle classification at the project intersections. All turning movement counts will be classified to distinguish vehicle classification, pedestrians, and bicycles. Before travel time data may be collected if the City desires.

2.3 Modeling: Using the collected traffic counts and existing signal timing plans available to the City, GTS will develop Synchro and SimTraffic models to understand existing condition operations at each of the project intersections. An accurate understanding of operational deficiencies is crucial to develop improvements at the conceptual level. Based on the results of our field visits and safety and Synchro/SimTraffic analysis, GTS will develop a set of improvements to be tested in the Synchro model for future consideration. The following are few examples of such improvements:

- Lead/lag phasing order based on platoon arrivals, turning movement volumes, and synch phase assignments.
- Phase splits that provide sufficient time to meet pedestrian minimums and minimize the frequency of underserving queues, except where strategically beneficial.
- Offsets that prioritize the primary direction of travel to the extent that flow directionality exists within each period of implementation.
- Re-striping or modification to intersection approach to change the lane configuration. For example, provision of a dedicated turn lane or changing a dedicated turn lane to shared movement.

Each set of proposed improvements will be vetted for feasibility and tested in Synchro to determine effectiveness in improving traffic operation. We will work with the City to select a preferred set of improvements, which will be included in the final optimized Synchro model.

2.4 Signal Timing Sheets: GTS will develop a spreadsheet of proposed signal timing parameters such as yellow times, all-red times, walk times, flashing don't walk times, minimum greens, lead/lag phasing, and synch phases for each study intersection. Additional timing parameters such as minimum bicycle timings, yellow timing for left turn, and through movements will be calculated per the CA-MUTCD. Finally, based on coordination factors, field observations, scenario testing with Synchro, and our signal timing experience, we will propose signal timing groups and cycle lengths for each of the synchronization periods.

2.5 Optimized Synchro Model & Implementation Support: Based on the findings of the above tasks, GTS will develop Synchro models inclusive of the preferred set of improvements with optimized signal timings for each of synchronization period. A table will be prepared to compare measures of effectiveness (MOEs) between the existing conditions and the proposed Synchro models. MOEs are anticipated to include LOS, total travel time, total delay, fuel consumption, and stops.

3. Review/Prepare Traffic Control Plans

GTS often assists with maintenance of traffic requirements for CIP projects from resurfacing projects to projects involving signal designs, signing and striping, and bicycle facilities design.

We will work with the City to efficiently prepare or review and approve plans and maintain schedules. We provide high quality through the plan check cycle, from planning and design to construction completion. Typical projects include:

- New traffic signals or traffic signal modifications.
- Power source and cabinet placement.

4. Prepare Grant Applications

We will assist the City with identifying and applying for funding to realize the various CIP projects. GTS has assisted various cities with grant applications and grant management. We recently carried out 3 grant applications for the HSIP program for the cities of Buena Park and La Habra Heights to help upgrade signal hardware, construct new signals, and upgrade guardrail. We understand not only the grant writing process, but equally important the scoring rubric that is essential to ensure successful grant applications.

Our team has previously supported the City of Commerce on successfully obtaining HSIP and ATP grants. As part of our project delivery, we also support cities with grant management and dealing with the funding agency requirements such as E-76 and others.

3.2.11.4 Professional Liability (Errors & Omissions):

(A) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(B) Contractual Liability Exclusion Deleted: This insurance shall include contractual liability applicable to this Agreement. The policy must “pay on behalf of” the insured and include a provision establishing the insurer’s duty to defend.

3.2.11.5 Workers' Compensation:

(A) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

3.2.11.6 Primary and Non-Contributing Insurance. All policies of Commercial General Liability and Automobile Liability insurance shall be primary and any other insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

3.2.11.7 Waiver of Subrogation. All policies of Commercial General Liability and Automobile Liability insurance shall contain or be endorsed to waive subrogation against the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against the City, its officials, officers, employees, agents, and volunteers, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

3.2.11.8 Deductibles and Self-Insured Retentions. Any deductible or self-insured retention must be approved in writing by the City and shall protect the City, its officials, officers, employees, agents, and volunteers in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

3.2.11.9 Evidence of Insurance. The Consultant, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates on forms approved by the City, together with all endorsements affecting each policy. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15) days prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced and not replaced immediately so as to avoid a lapse in the required coverage, Consultant shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

3.2.11.10 Failure to Maintain Coverage. In the event any policy of insurance required under this Agreement does not comply with these specifications or is canceled

and not replaced immediately so as to avoid a lapse in the required coverage, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement effective upon notice.

3.2.11.11 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to transact business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.2.11.12 Enforcement of Agreement Provisions (non estoppel). Consultant acknowledges and agrees that actual or alleged failure on the part of the City to inform Consultant of non-compliance with any requirement imposes no additional obligation on the City nor does it waive any rights hereunder.

3.2.11.13 Requirements Not Limiting. Requirement of specific coverage or minimum limits contained in this Appendix are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance.

3.2.11.14 Insurance for Subconsultants. Consultant shall include all subconsultants engaged in any work for Consultant relating to this Agreement as additional insureds under the Consultant's policies, or the Consultant shall be responsible for causing subconsultants to purchase the appropriate insurance in compliance with the terms of these Insurance Requirements, including adding the City, its officials, officers, employees, agents, and volunteers as additional insureds to the subconsultant's policies. All policies of Commercial General Liability insurance provided by Consultant's subconsultants performing work relating to this Agreement shall be endorsed to name the City, its officials, officers, employees, agents and volunteers as additional insureds using endorsement form ISO CG 20 38 04 13 or an endorsement providing equivalent coverage. Consultant shall not allow any subconsultant to commence work on any subcontract relating to this Agreement until it has received satisfactory evidence of subconsultant's compliance with all insurance requirements under this Agreement, to the extent applicable. The Consultant shall provide satisfactory evidence of compliance with this section upon request of the City.
